

Know More About Breast Cancer Discovery it Early and Protect Yourself!

If you're a woman in your 20s or later, It's time to get in touch with your breasts.

This product is not a medical device. It is a healthmanagement tool, recommended for conducting breast self-palpation to check for signs of breast cancer. As physicians and institutions that deal with breast cancer the world over repeatedly emphasize, awareness of one's own breasts is a vital part of the early detection of breast cancer. Use this product to conduct regular breast selfpalpations, record the results, and obtain regular examinations using mammography* at a medical facility. It's up to you to protect your health.

*X-ray examination

Don't forget to undergo regular examinations by a physician, using X-ray mammography machines and other dedicated equipment.

In recent years, Japan has witnessed a sharp rise in the incidence of breast cancer. For Japanese women, the prevalence rate of breast cancer is higher than that of any other cancer.

Breast Care Glove

According to cancer screening guidelines published by Japan's Ministry of Health, Labour and Welfare, breast cancer can be detected early through screening. The Ministry has recently rushed to establish a screening framework for breast cancer, focused on X-ray screening, but this system by itself is not failsafe.

Self-palpation is strongly recommended as a means of covering the blind spots in one's cancer screening regimen, detecting the signs of cancer in the interim between regular examinations.

Recommendation

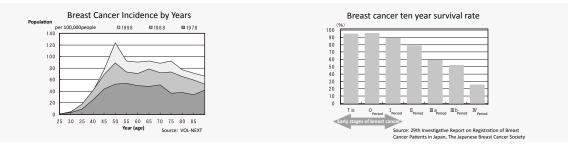

Self-palpation and regular examinations are highly recommended

- * Breast cancer generally occurs in the mammary glands (especially in mammary ducts and lobules). Through selfpalpation, women can often detect deformation of the mammary glands (which may or may not be caused by breast cancer) at an early stage.
- * Discovering changes in breast tissue early through weekly or monthly visual self-screening and self-palpation is essential. There is nothing any woman can do to prevent breast cancer absolutely. But you can take precautions to ensure that you don't die of breast cancer. The answer is breast care (breast examination). The only way to do this properly is to combine weekly or monthly visual self-screening and self-palpation with regular examinations at dedicated medical facilities
- * Once every year or two, be sure to go to a dedicated medical facility for regular examinations, using X-ray mammography and other tests as necessary.
- * Self-palpation and regular examinations are the two pillars of breast-cancer prevention.

What is breast cancer?

Breast cancer is a malignant tumor of the mammary gland. It has no initial symptoms and can sneak up on the unwary. There is no method of prevention.Breast cancer can happen to anyone. Fortunately, if detected and treated early, the prognosis for successful treatment is 95%.

Incidence of breast cancer is rising sharply in Japan; it is thought to strike one in every 18 women. For women in their late 40s, the incidence is several times higher. In the United States, one in eight women is afflicted with breast cancer, and the prevalence rate for women over 50 is still rising.

The Effect of the Breast Care Glove

When wearing the Breast Care Glove, the fingertips become extra-sensitive. Touching the mammary gland is the basic task of palpation.

easily over the skin, enabling highly
